Save Report plugin user guide

1.Adding the SaveReport Plugin to JMeter

Extract and copy the lib folder to JMeter folder.

2.Using the plugin

Add the Save Report Listener to the thread group by rightclicking on the thread group >add listener >Save Report.

2.1 Using the Plugin in a test

1. Set the Test report output folder by using the Browse button
2. If you want the PDF report to be generated the Save as PDF checkbox should be in its checked state.

2.1.1.Test Completed Notification settings.
1. Click on the set mobile No and Emails IDs button
2. Set the Mobile Phone Number that should be messaged a notification when the test completes.
3. Set the list of email ids that should be emailed the test report on test completion.
4. The next time the plugin is used from the same installation, these same details will be used for notification until changed.

When you run the test, the test report will be saved iin the folder specified and will bear the name specified for the listener in the name panel and the timestamp when the test was started.

2.1.2.Email SMTP server settings
The default server settings in the SaveReport Email.properties file located in jmeter/bin are

```
#Properties file for storing settings for email
#Mon Jun 23 11:07:24 IST 2014
authentication_required=true
port=465
password=mnisrp2014
authentication_type=ssl
username=savereportplugin@gmail.com
```

```
smtp_server=smtp.gmail.com
```

These settings can be changed in the properties fileto use a different mail server according to the user's choice.

2.2.Using the extract CSV to PDF utility

1. Click on the extract csv to pdf button
2. Specify the source csv file (CSV Summary/Aggregate report)using the browse button
3. Specify report output folder using the browse button
